

Nova P300c Barn Doors

Main Features

- Fits Snugly into the Nova P300c Accessory Slot
- Fabric Light Leak Covers: Flexible Covers with Hook-and-Loop adhesive prevent any excess light leaks, unlike traditional barn doors
- Durable Aircraft-Grade Aluminum Construction
- High-density Textile Carrying Bag

Product Description

The Aputure Nova P300c Barn Doors are a four-leaf light control accessory specially designed for Aputure's first high-output RGBWW LED panel light, allowing users to quickly minimize excess spill light and adjust the fixture's illuminance area.

Its high-quality aircraft-grade aluminum build is durable, making it a welcome addition to any filmmaking environment. The included Fabric Light Leak Covers solve the problems present in other barn doors, by eliminating excess spill light from the sides of the barn doors.

As a native Nova P300c accessory, the Barn Doors slide into the P300c's accessory slot for a seamless, secure design.

Like the other P300c native accessory, the Nova P300c Softbox, the Barn Doors also include a heavy-duty carrying bag.
